Let us know SJ!Support@viz.com Aug 25, 2021 version 5.3.2 are a heavy reader and can go through a rather fast series. What I would like is if the app could track the pages in which they are for various manga. Cause some series when I go to the next chapter they are already on the last page and scrolling through 600 chapters only to get to a chapter 18 pages is long enough and sometimes scrado the app will crowse, gives me kick which page I'm leaving to Let me slide with another 5 minutes to chapter 20 out of 670 Then among the chapters are advertising data to buy a physical copy of the manga.I already paying for the online service because I should buy a physical copy? I mean that I can understand to try selling the PBS but honestly. It is a nuisance that I say again IÁ, á Á "m paying for online service. You are going to the online service most of your sales pb inevitable cash. I would say that PBS will be conveniently turn off your premium subscribers that exist. Not telling that every reader will be strictly online but in my opinion if you will see a good series online a truly moving serialization, I move paradise and earth for a PB menta just to have on my shelf. End of Rant The content of this app is fantastic, but there is so many basic ui characteristics that hold it back. For one, if you are reading in horizontal mode at the end of the chapter force the force rotates towards the portrait to hit the next button chapter. After hitting the next button of the chapter you have to rotate I n portrait and then return to the landscape to go back in reading 2 pages at a time. Furthermore, the next button in the chapter becomes truly annoying when a series is obtained. Why can't flue the next chapter or car go to the next chapter if you scroll during the last page? Two frustrating having to click on the next chapter button especially on larger phones. Finally, the limit of chapter 100 for download download All right, but it would be nice to have a delete Á a mass or the possibility of automatically removing a download after reading it. How that I have to click on each check mark and click Confirm for each individual chapter I want to remove to make room for new chapters. If these features arena t available, perhaps, at least allowing the user to change the period of time 7 days to be less time it would be useful as a sort of work around to pair downloaded manga. Furthermore, the site allows you to follow Manga but the application has no place to show which manga is followed. Why? Overall I believe this application has a potential and continued to use it because the content is good. But the ux could be significantly better. So 3/5 It is an incredible application with an incredible manga library, and \$ 2 a month is an amazing affair. The only reason you didn't reach a five-star from me was the lack of bookmarks that makes it a nuisance to keep track of the currently publisher manga and / or keep track of what the chapter has been interrupted before closing the application. It would be nice to have a list of favorites where you can mark the manga you are following, as well as a bookmark function that allows you to touch the name of the manga and it automatically puts you in chapter and the page where to read. The chapters for MHA, black clover, and other works on Friday published on Sunday, this is a big problem, because you are shonen so sit sites because they are pirate they fight for a fist in speed publishing? It was ruined by several chapters of MHA and Black Clover because of this. In addition to these two major problems thereAAA Á ri different small drawbacks of missing pages or pages do not load even if you are connected to the strong sense of really a problem of the information server. If these problems are solved I have no doubt in my mind that I review my 4-star rating at a 5-star legitimate rating.
