Open and close Apps Control Notification Dots Firefox allows you to create shortcuts on the screen Initial of your Android so you can quickly access your favorite websites. Delete the need to type a web address whenever you want to access the site - just touch your link to open the page. Here's how to do it: Open Firefox for Android and go to your favorite web page. Press the Menu key (under the screen on some devices or top right of the browser), then tap. Tap. Your connection should now appear on the home screen. Tip: If you want to change The link on the link, bookmark the page first, then change the title on the Edit Bookmark window. On the bookmark panel, take a touch Long on that site and choose. These beautiful people helped write this article: from Derek Walter, Greenbot | There Main of smartphone or tablet is just for apps. Whatever the platform you are using, you can identify your favorite websites to the home screen so you can access them quickly. Some platforms offer bonus functionality. For example, Chrome for Android opens these websites in your browser interface windows, while Windows 8 and Windows Phone offer live tile updates on some websites. Android starts Chrome for Android and open the website or the web page that You want PIN to the home screen. Tap the MENU button and tap Add to homescreen. You will be able to insert a name for the connection and then Chrome Will Will With your main screen. The icon will appear on the home screen like any other connection or widget of the app, so you can drag it and put it wherever you like. Chrome for Android loads the website as an app $\hat{e} \hat{a}, \hat{a}$ "web app" $\hat{e} \hat{a}, \hat{a}$ when touching the icon, then you will receive your own voice in the App switcher and didn't win the browser interface. Other popular Android browsers also offer this feature. For example, Firefox for Android can do it if you touch the Menu button, tap the page option and tap Add to the home screen. iPhone, iPad and iPod Touch Touch Start the Safari browser on Apple's iOS and browse to the website or the web page you want to add to the home screen. Tap the Share button on the browser toolbar $\hat{e} \hat{a}, \hat{a}$ "That The rectangle with an arrow facing up. It is on the bar at the top of the screen on an iPad, and on the bar at the bottom of the screen up An iPhone or iPod Touch. Touch the icon Add to the home screen in the company menu. You will be asked to name the link before touching the Add button. The shortcut can be dragged around and positioned anywhere, even in the folders of the app - own As a normal app icon. (To create app folders on iOS, touch-and-drag the icon of an application icon from another app and keep it for a moment.) When you touch the Icon, load the website in a normal card inside the Safari browser app. Other browsers, such as Chrome for iOS, do not offer this function. Due to Apple's iOS limits, only Apple's Safari browser authorized to do so . Windows 8, 8.1. Related RT: COM And activate Windows 8, 8.1 and RT devices webs in Desktop Citizens web apps also offer a way to PIN websites to the home screen. This is obviously very useful on Tablet, not on PC desktop where you don't want to see the home screen. On the Windows desktop, you can re-read the shortcuts of the website to the taskbar for easier access. First of all, open the modern Internet Explorer browser - this is what you're probably using on a tablet, anyway, as it offers most of the optimized touch experience. Switch to the website you want Pin, pull up the app bar $\hat{e} \hat{a}, \hat{a}$ "for example, by right-clicking or scroll down from the bottom of the screen $\hat{e} \hat{a}, \hat{a}$ " and tap The Star icon. Tap the PIN icon, enter a name for the link and click PIN to start. The website will appear as a card on the home screen. Tap the tile and the website will open in Internet Explorer. Some websites offer support for live tiles $\hat{e} \hat{a}, \hat{a}$ "Windows will use an associated RSS feed to view the latest titles and updates from a site if you apply to the home screen. Most websites have not been configured for Support this function. If they have, you see updates after fixing it to the home screen. Windows Phone The process is similar to the Windows phone. First, open the website you want pins in Internet Explorer. Touch the button more ($\hat{e} \hat{a}, \hat{a}$ \rightarrow $\}$) and tap PIN to start in the menu displayed. Windows Phone 8.1 supports the tile updates live from websites that have configured the function, just like Windows 8 does. If you have another type of smartphone or tablet, it probably has Also this feature. Just open your browser and look into its menu for a named something like this as $\hat{e} \hat{a}, \hat{a}$ "Add to the domestic screen" or $\hat{e} \hat{a}, \hat{a}$ "Pin to home screen. , \hat{a}, \hat{a} - To remove a website link from your device's main screen, just press the link for a long time and remove it as if it were any other app icon. To add an Android app icon to the home screen, press a Its icon and select Add home. Long press an app icon then press the name of a function and drag it in the home screen to create a shortcut of app function. To make a link to the website on Android, open the site in Chrome, tap Ellipsis and select Add to the home screen. This guide will explain all the steps to add an app icon to an Android tablet or a home smartphone screen, how to make a shortcut for a website and what to do to make a shortcut for an Android app function. You can add a link for any app to the Android Android main screen As long as you have installed the app. Here's how to do it. Open the list of all your apps. This usually can be done by touching the icon that looks like a white circle with six blue points in it. Find the app you want to create a link to and press a long time on your icon. Tap Add home. The app icon should then appear in the upper right corner of the home screen on your Android tablet or smartphone. Long press the app icon and drag it from where you want it to be. Some apps for Android support functions that can be accessed by performing a long pressure on their app icon. These functions can be blocked on the Android home screen as a separate icon to function as a shortcut to that specific task. Perform a long press on the app whose function you want to create a link for. A menu of the available app functions should appear. Long press the function you want to create a link to and drag it to the home screen. Move the connection icon to the desired position and release your finger. The icon will now work as a shortcut that will open the Android app and immediately activating this specific function. Very similar to how to create shortcuts for apps and app functions on Android tablets and mobile phones, you can also add shortcuts to the websites to the main device screen. For this example, we use the Google Chrome app that is pre-installed on most Android devices. You can also create shortcuts of the website with some other Android web browser apps that use similar steps even if the phrasing could be slightly different. Here's how to insert a shortcut for a website on the Home Android screen. Open the Chrome Chrome web browser and go to the website you want PIN to your home screen. Tap the ellipsi icon in the upper right corner. From the menu, tap Add to home screen. Enter a custom name for the website. This name will be the word or words that will appear under the shortcut on the main screen (shortest is better). Tap Add. Tap Add automatically for the connection to be added to the upper left of the home screen. Alternatively, you can hold the icon for a long time and manually position the website link icon. Any option chosen, you can manually move the shortcut icon later where you like. There is no need to create a shortcut for the home screen like all Android devices have embedded ways to return to the home screen, regardless of the app you are using or which video you are looking at. GUVENDEMIR / ISTOCK not released / gettyimages to return to the home screen, tap the Home button. Depending on your model of Android smartphone or tablet, it may seem like a circle or a horizontal line. It is always located under the screen. Alternatively, some Android smartphones allow you to return to the home screen by sliding up from the bottom of the screen. To delete a shortcut from the Android home screen, press your icon for a long time and tap Remove from the popup menu. This process will simply delete the icon for the connection. To delete the app from your Android smartphone or tablet, tap uninstall from the same menu. FAQ How can I create a link for a downloaded file on Android? In my files app, go to the Downloads folder and select the file. Then, touch the three points in the upper right corner and choose Add shortcut from the drop-down menu. How can I create a contact link on my Home Android screen? You can add contact links as Android widgets. In the Widget menu, select Contacts to add a contact to the home screen. Are the shortcuts incorporated on my Home Android screen? How do I find the apps hidden on my Android? In the app drawer, touch the three points in the upper right corner and select Hide app to view your Android hidden apps. If you don't see the Hide Apps option, you have no hidden apps. Thank you for letting us know! Tell us because! Because! Because!
