# Mi phone storage other files

What is other files in mi storage. What is other files in xiaomi storage. What is other files in redmi storage.

Delete other files on Xiaomi Redmi phones: - Android phones are facing huge problems with internal storage for a period of time and this problem is impossible to deal with when you need space on your phone and your phone is viewing of Message & & - "SUSUFFIE SUSSO space". I suffered the same frustration for over a day and the struggle really difficult to understand a solution to this kind of problem. Many Android experts will tell you to uninstall some apps or clarify the cache and data going to Settings -> Apps and did or did not remove the space from your phone believe me. When you delete these files from your phone, Redmi will store in a temporary folder from which they are impossible to delete because you cannot access the folder by any means, no matter which app installed on the phone. You can only see the other files accumulate more storage space on your internal unit in a Redmi phone. You can see the enormous file block archive in your other folder by going to Settings-> Storage but nothing more and all these files are deleted the data you have been installed once in your phone. If you have to do with this kind of problem, then don't worry because on this page you will tell you exactly as I recovered 5 GB of space on my phone Redmi from other files. Delete other files on Redmi phones There are more tricks to delete your other files from data from your phone I included in this section: - Makeup # 1 Installing Analyzer Storage App Go to Play Store and download the storage application of Anton Patapovich & Application in your phone of Redmi. Once installed open the app and tap the memorization of the card. On the device storage card, touch the first disc on the left side. Once you take it, you will start uploading the wait files that you load and then go to the file categories. On the file categories page, touch the others and choose the best files in the list. Once click on the top file, it will take you to the list of files here click on the date icon at the bottom right of the page, and then tap Option Select All. Once each file is selected, select the option again to delete the files. Makeup # 2 Restart the simplest as it sounds but works as a charm Follow the first trick and delete the other data after restarting the device and once restarted the device, check the space of the other files will be reduced to MB instead of GB. It is advisable not to delete the data because they store the game, the cache and other data needed to reduce the speed of the phone. For more information on removing or deleting other files on Redmi phones, remain updated on this site. There have been many bugs that have been introduced by the MIUI 12 update, which developers are fixing with subsequent updates. But as they continue to fix all the marked bugs, there is a report on a bug that currently affects the storage space. The other files based on the storage space keep up and this started after the MIUI 12 update.Left: MIUI 12 Right: MIUI 11 for the screenshot published by a user in the Community Forum MI. Show the storage details of which & & - "other part" occupies a whopping 95.35 GB while the apps get about 1% of this; 6.35 GB. A quick look at the storage details of a Xiaomi phone still running MIUI 11 shows - other files "crossing files" occupies most of the space after apps and app data. Although the difference is not much, but 95.35 GB for other files is crazy. The device that is interested in this storage bug is the note redmi 9. A moderator has recognized the bug and promised to verify the problem with the team and then report. AND Moderators still have to publish feedback, another user led to Facebook, where he reported the same issue. Other files in storage Spacelooking to the details that have been published on Facebook, the "other files" occupy more space, followed by apps and games. However, the difference is not much, unlike the first screenshot. Although there were a lot of suggestions suggestions The Comments section on possible ways to solve the bug, we advise you to wait for the moderator feedback. We will update this post once the feedback from the moderator is received. However, we would like to know if you turn to this problem after updating the latest Android Miui 12 skin 12. To access other files in storage space, go to settings >> My device >> Archiving. Compare your details with the images at the top and see if you are interested .Update: 25/01 / 2021Cording to a moderator in the MI Community Forum, & & - & "This is cache files. Check your app archiving and see what app data is increasing. & >You should use the App Cleaner and the data of the deleted apps and see if this helps .. Source (s) Facebook & | Mi Community Xiaomi Mi 8 Lite The owners often complain that his interior space fills quickly. There is no way to download a new application or take a video. But fortunately, there are some simple ways to cancel the storage of Xiaomi 8 lite. Manually delete unnecessary files The owner of Xiaomi Mi 8 Lite has not deleted the device for a long time, first of all it is worth getting rid of large files that have not been used for a long time. This can be a downloaded movie, music files and other data. To delete files, you need to open the "explorer & & - , select a folder or file, then click the "Delete" button. Remove unnecessary appsmany applications are downloaded to your smartphone during Xiaomi operation Mi 8 lite. Many of them are forgotten after a few days, but continue to fill the device memory. To delete these apps, you need to keep your finger on the game or program icon for a couple of seconds, then move the 'Icon in "Eliminate" "Testing. After that, the software will be removed. You can also uninstall the application via Google Play or Settings. Clear the most rational cashe option for those who plan to continue using the program. Applications quickly accumulate temporary data, which is commonly accumulated indicated as a cache. Cache removal does not lead to serious problems. The user must not re-demurize in the app. Cache opens is performed as follows: Open the device settings. Go to the Applications section. Select Prograf. M that takes the greatest number of space. Press the Clear Cache button. When performing the operation, do not confuse the cache with the application data. If the cache is a temporary file whose cancellation does not lead to any problem, data cancellation will end with the user is forced to access the account. Instead the files from Istant Messengerwhen using whatsapp and other similar messengers. Xiaomi Mi 8 Lite Users often send photos to each other. They are not deleted after seeing, but saved in the device's memory. Therefore, they must be removed manually. All multimedia received via WhatsApp are stored in the folder with the same name, which contains directory called "Images" and "Video". These directories must be deleted via the file manager or via the "Explorer" of the PC. Using Special Applications You can install an application on Xiaomi Mi 8 Lite able to analyze the internal memory of the device and find the trash (temporary files) in it. There are dozens of similar programs. One of the most popular is called CCleaner. After downloading the app, the user must open the program, go to the "Trash" section and start scanning. At the end of the scan, the application will offer to free a certain space. Everything that remains is to confirm the operation. If the memory is still low of the previously discussed methods allow you to free up The space on the internal memory of Xiaomi me 8 lite. However, even the deletion of a large number of files does not lead to optimal results if the owner has purchased the device version with the minimum quantity of memory. There are a couple of ways to fix the situation. First of all, you can install a microSD card. Expands the internal storage of 32-256 Gigabyte depending on the selected configuration. Secondly, place. It is an option with the loading of personal data in a "cloud" service as Google Drive or Yandex Disk. But you have to be careful, as only a limited amount of space is provided for free. Expansion of virtual storage space requires a subscription. Discover the appropriate option, the owner can transfer most files into a microSD card or upload data to the "cloud". Unfortunately, applications cannot be moved. But you can get rid of photos, videos and music without problems. But he continues to continue growing day after day. Some solutions? Question version of the firmware used ... and phone model in developer mode..enable "Use of use of the CPU" See..This app is busy doing things or install CATLog from F-DROID SEE what is running and see The error log or run the antivirus app? Or more recent firmware update? Just..some Thoughts interesting problem .. Im sorry.im novelty to this but I can't find the use of the CPU on the developer option. I also installed CATLOG but I don't know how to use it. And what anti virus are you referring? I also installed the latest firmware I still can't detect anything with that. It only tells me how much I use I use, but only shows the same data I can see on my file Managerer file manager internal storage show show hidden files Miui Gallery Gallery Cloud Trashbin eliminates all the files within the Crashbin. I hope you help you. Reactions: SD SHADOW I have the same problem. I tried to reset the factory how many times, 2x rigid reset, the problem still exists. Waiting for firmware update, but it takes time and storage is full again while waiting. Some friend suggestions? Hi everyone, my two cents here. It seems that somehow when the information is eliminated to end up in a sort of partition that the cell cannot reach or show. I have All storage cleaning apps that I could find useless. When connecting to a PC it doesn't even show big files. In fact, when you look at it as a disc connected to the PC seems to be complete; However, if you select the content there is little occupation. I also promoted MIUI 12 but the question persists. So I noticed that it takes more time to fill when it is not inserted SIM card. It takes a couple of days instead of hours to fill the storage of other files. My only other option is now trying to roll with the magisk and try a personalized rom, but never done before and I You want to morning it if there is some other options. PS - There are some other items for this same problem in MI.com and other pages for this and other Xiaomi models and everyone seems to be impossible, so I wonder if it could be a HW problem. I had a bit of time that turns with this device, it's a lot of kit and a strong deal. I had the same problem / similar and found that Miui local backups have never expired. I found a long list of historical backups in the MIUI settings, you can delete them there or simply delete MIUI> Backup in File Manager. So maybe disable local backups. We hope this is the same for you, Holla Back. Thanks for the suggestion, but not even luck. There is nothing, even switching on the "hidden files" option, which requires a great amount of space in my device. Probably the question is exactly that; The device does not delete backups but the real problem seems to be that they are not able to locate them (probably does not seem even them). Reactions: Wall94 Hello. I have the same problem since last month. I bought the phone last year in May and the problem has just arrived last month. The "other files" increased by 3 - 4 GB per day without reasons. After carrying out the factory restoration, my phone memory was full after 1 week (64 GB). I went to the Xiaomi service center. Forming the memory and install the previous version of the operating system. However, he did not help. My phone memory was full after 2 weeks. I returned to the service center, and they didn't even have any idea. Then they replaced the motherboard. Technically speaking, my phone is new, with the new IMEI number. But surprisingly, my memory has been complete again after 2 weeks! Fortunately, my phone is still under warranty. I insist to get a new phone, but the procedure is not so easy. I asked to return to the service center next week. We hope there will be good news. Thank you @pangayoman please let us know how you go! The factory reset also seems here the only solution (10 lite note) but over time the other files still increase. Strangely enough all the tools of cleaning and storage of the tools do not see other files at all and fail to remove you ... does anyone try a personalized rom, like CRDID0? This can exclude hardware problems ... I haven't tried a personalized rom yet, as I never did it before, but I think it's time to try it now. Otherwise I have a brick because I can't use the apps I need even if I spend more time by installing that you use them. Can anyone help me ?? As a cleaner shows that my apps have occupied 3 + GB, but the system shows that my apps occupied 8 GB ... How can I get access to the system memory (app data and apps) ?? (As if I can't even click and find out what it requires so much memory) I have my system in a different language, so the translation could be inaccurate, but it should be something like that: Settings -> Information on my phone - -> Tap Storage -> Tap App and Data. This should do makeup. The problem discussed here is slightly different, though. Page 2 Great News, Thank you! I will prove (even if they have already managed to install Magisk and semi-rooted the phone .. I'm not sure if I should try a personalized Roma first to avoid ruining the job already done) Install 12.0.3 Indonesia Stable. Unfortunately Xiaomi resolves Problem in this ROM, the FastBoot option is not available for download and the ROM version does not work for me as the three points in the Settings area do not allow you to select a local ROM, just to download updates for download version installed Current ... looking for other options. Is it different from the Miui Global version 12.0.3 and Indonesia? Mine, after downgrade at 12.0.3 Global version stable only for 1 week, after the other file keeps up. First you need to unlock the bootloader before installing the Indonesian rom. There are so many YouTube videos to unlock the bootloader. Bootloader. Check the tutorial. And download the ROM from here. . .
