Instellingen exchange server android

Instellingen exchange server hotmail android. Instellingen exchange server outlook android. Instellingen exchange-server android.

Use these mail server settings if you need to manually configure the e-mail app (client) to use an iCloud e-mail account. You can use the mail server settings in this article to manually configure the e-mail app to send and receive e-mails with an iCloud e-mail account. However, you don't need to do it if you encounter iCloud system requirements and can use any of these configuration methods: refer to the documentation of your email app for information on how to use these settings. iCloud mail uses the IMAP and SMTP standards supported by most modern e-mail apps. iCloud does not support pop. If you set up an account using iCloud system preferences or MacOS mail in 10.7.4 or later, these settings will not be displayed because they are automatically configured. Server Name: imap.mail.me.com SSL Required: Yes If an error message is displayed when using SSL, try using TLS. PORT: 993 Username: Usually the name of your iCloud email address (for example, emilyparker, not emilyparker@icloud.com). If your e-mail client can not connect to iCloud using only the part of your iCloud address name, try using the full address. Password: Generate a specific app password. Server name: smtp.mail.me.com SSL Required: Yes If an error message is displayed when using SSL, try using TLS or StarTTL. Doors: 587 SMTP authentication Request: Yes Username: Å, your complete iCloud email address (for example, emilyparker@icloud.com, non-emiliparker) Password: Use the specific password of the generated app when you set the mail server arriving. * You just have to use a specific app password if you are manually configuring mail with your iCloud account in Windows, if you use Mac OS X Mail (10.7.4 and previously), or if any other third customer is used Party mail.
