Maybe he's a little selfish, but they're really fun! Developed by Joybits Limited in 2015, Doodle GOD (and its splits) was made to put players in charge of the universe, literally. Your job is to use your divine powers to create, well, everything. Vehicles, animals, technologies, people, plants, and literally everything you can think about, are found to grab them in this game. It may seem an impossible task for us humble and short humans, but to doodle, God, nothing could be more common. Everything starts from the most basic elements. How to play Doodle Gued Senses in Doodle GOD as the maximum climber. All you need to create something is two elements. Speaking of elements, at the beginning of this game, begins with the most basic elements around fire, water, knowledge, space, etc. It is your job to open a category, select an element and combine it with another element to create something new. If your two ingredients don't mix together to do something new, then to choose something else until you have found a winner. As you create more and more things, you will unlock new "groups" of possible materials. For example, a tool is a group, another vehicle, etc. Tips for Success It can be tempting to click around like crazy until you just mix up a bunch of items, but it's much more satisfying if you take the time to think about what you want. In some ways, this is almost like God's thought process being reversed. We already know that there are rocket ships, cars and lizards, so if you take a second to think about what the building blocks of these elements would be, you can create them. For example, combining an airplane with space will give you a rocket. So, since you now have an item that you didn't have before, you open up new manufacturing recipes that involve rockets. And so on until you have created the universe. Master of the Universe, right? Obviously it is not a small task, but if you somehow managed to create your path through a whole universe of beings, inanimate and living, then our hats went to you. Remember, however: God only rested one day. Take a second to kick in the back, but then it's time to get back to work! When you're ready to keep flexing your brain, head to our free craft games for more opportunities to do great things. You can also check the collection of idle games to accumulate huge reserves of resources without having to work for it. Who doesn't like the sound of that? Until then, we hope to see your white beard waving in the wind as you preside over the earth in these God Doodle games. Windows The phone already had a game of "Gods" from Xbox Live before JoyBits Doodle God graduated from indie to Xbox Live status. That title was Pocket God, a poorly supported and overflowing port of the iOS game. However, idle God and pocket God could not be more different. Pocket God Try to circumvent the worshippers of the abyss through mini-games, while Doodle God focuses on the aspect of the creation of the goddess. As it may be creating a world and popularizing it with new things takes a keen mind and a lot of trial and error. No wonder a guy needs a break after six days! According to Wikipedia, Doodle God is based on a couple of old games about alchemy. So you really don't do anything more than mix things up and see what comes out of this. However, the structure of the game certainly reflects what a universal creator would go through starting from scratch. As the titular Doodle God (DG for short), you start with access to four basic elements: earth, water, fire, air and heart. Track the last one; that's Captain Planet. Anyway, of those simple ingredients, a whole world and everything in it will eventually come out. It doesn't take long to learn the alchemical interface of God Doodle. Simply tap a group to expand it and see the sub-elements it contains. The four basic elements I mentioned double as groups and individual elements, meaning that the fire group will eventually contain old fire, lava and other hot things, etc. When a newly discovered element does not fit into an existing group, a new group is formed. Actually remembering which group contains what becomes progressively more difficult as groups and elements accumulate. That might be by design, but I'd prefer a more simplified way of tracking everything. The combination of elements couldn't be simpler. At any time, you can have up to two open groups on screen. Either drag one item to another or just hit the first item and then the second, and they will merge. Some things just don't mix and you will get an error sound. But assuming they are successfully combined, one or more new items appear on the screen and are added to your resource group. Sometimes items within the same group can be combined, and in rare cases you will need to mix two of the exact same item. For example, Computer + Computer Internet. While we are on the subject of the elements (which (which number among the hundreds), a small complaint: the Windows Phone version of Doodle God unnecessarily censor Sex and Vodka (truelly two of the best creations in the world) of the game. Confucius says if we can't have fun hitting boots or hitting a back, how then? Well, one of the most fun aspects of creating new elements is that almost every discovery is accompanied by a relevant quote or proverb. Just a small sample: make a snake and you will see that Steven Wright once said: "Even snakes are afraid of snakes." And the fans of the Muppets will enjoy reading, "It is not easy to be green," attributed to Kermit the Frog. These gossip instill humor and personality in what otherwise might have been a dry experience. They're not perfect, though. The score makes it like finishing dependent clauses with periods, a few repeated quotations, and even the occasional lack of an appointment for a new element sometimes appears. However, these errors are rare enough not to diminish the experience. Four parts make a whole Doodle God divided into four episodes, all of which are preceded by an ingenious narrative introduction. There is no real distinction between each episode; once you discover all the elements of that episode, you will end in the next with a new number to fight for. Each episode provides access to the above elements, only the ability to make new combinations the difference. As such, I found unnecessary division. It is a relief of the original development process in which episodes were free content updates, and no longer needed. On the other hand, the sequences of short stories serve as pleasant milestones. Missions After completing the main game, four separate missions provide additional alchemical emotions: Save the Princess; Run, Santa run; Sins vs Virtues; and Windows Phone for 20th Century Greatest Inventions. Each one of them has an unique goal, such as making gifts (specific elements) for six creatures in the Search. Regardless of the target, however, you are basically trying to discover all the elements you can, as well as the main game. But the initial elements and the elemental grouping are completely different in each search, instilling some drops of additional challenge and vigor to the established alchemic formula. Minigames Progressing through the main game also unlocks a couple of minigames based on the central alchemy mechanic, not unlike the minigames in Plants vs. Zombies. The minigames included here, MatchTrix and Bejowed, are based on falling block puzzles like Columns and static games match-3 ala Bejeweled, respectively. No one works particularly well from the idea or memory of which elements match each other in the fly while also trying to clean the board is a kind of headache. Minigames also lack achievements, so most players probably only show once and then move. Achievements God includes a fair number of accomplishments of completion to reach new episodes in the main game and knock each search. There are a couple of problematic achievements to complete the game without using clues, however. You see, during the main game you can press a bulb icon at the bottom of the screen to reveal a combination that you have not yet done. Unfortunately, the game doesn't ask if you really want to use the track, so it's too easy to hit the bulb and disqualify yourself from achievements by mistake. Even worse, restoring the game data will not make the players eligible for the achievements again. If you have selected that bulb, you will have to remove and reinstall the game and start again to get your GamerScore. It is a frustrating combination of supervision and failure in the developer part, but not insurmountable. JoyBits has promised to fix the problem - along with add supportfast very needy - in a future update. general impression doodle god is an interesting game thatEntirely around test and error. If you play without a guide, you have to combine things again and again while trying to keep track of the combinations you had already tried. I discovered that the main mechanism initially invigorated, but it became tired as the catalog of elements and groups stacked in Brobdingnagian quantities. In so, people with minds more scientific than my own could have an explosion that trace everything. Those people will enjoy the sequel doodle devil, currently available as an indie title. The third input of the series, doodle farm, did not reach Windows Phone. But even if he does not care about endless alchemical experiments, Doodle God sells for only 99 cents today. Thus, the hunters of achievements do not hesitate to give him a spin of the divinity. Doodle God costs 99 cents and there is a free trial. Discover it here in the market. Update: The price increased to \$ 2.99, which is really too much for this particular game. play. 02/09/2011 - Really happy with the god remodels we've got in the last few years!
