Veeam one reporter collection job task failed

Veeam one reporter job object properties collection task failed. Veeam one reporter collection job session task failed.

How should we proceed with that index? We also hope, that the creation of the index is not preventing the future upgrades of Veeam ONE from installing correctly!?!? Shestakov Expert Posts: 7328 Liked: 776 times Joined: May 21, 2014 11:03 am Full Name: Nikita Shestakov Location: Prague Contact: Contact Shestakov Post by Shestakov Á»Á Jan 29, 2019 4:27 pm this post Hello Iain, have you upgraded to update 4 or made an installation? Products Solutions Resources Partners Company How To Buy I want toÁ Áreport aÁ Átýpo There is a misspelling right here: I want toÁ Álet theÁ Áveeam Documentation Team know about that. Performing rollback to the previous session state... This returned a suggestion to create a missing index: /* Missing index Details from SQLQuery7.sql - SQLSERVER.VeeamOne (DOMAIN\USERNAME (399)) The Query Processor estimates that implementing the following index could improve the query cost by 23.7809%. The conclusion from the support after that was, that the disks of the SQL server must be the bottleneck. BTW it seems, that we solved another issue with that: When we started maintenance on a Cluster or Server object, the maintenance was set immediately, but when we wanted to exit the maintenance mode, it was never done -> Veeam ONE server reboot was necessary This now also works fine, after the creation of the index. I opened a case (#03108570) and the support told me to increase the timeout to 10 hours. After 6 hours the timeout canceled the task and all objects were failed.
