Main Reasons to Take Nowadays, the percentage of men around the world suffering from various sexual disorders, both on occasional and constant basis, has exceeded 40%. Today's lifestyle differs from the one that people used to have, for example in last century and is very active, and once combined with negative effects to health (e.g. stress, aging, unhealthy lifestyle, cardiac issues), may result in Erectile Dysfunction (ED). Fortunately, this type of disease can be treated among majority of men without causing any major negative effects to health. Generic Cialis from Canadian pharmacy is one of the most well-known ED medication in current market and definitely can aid in gaining erection within a short time period and without any harm to health. List of Vital Facts Regarding Generic Cialis Cialis may also appear under alternative name Tadalafil. It belongs to selective inhibitors group of PDE5 medications and cures erection-related issues faced by men. Likewise, it is really important for everybody who plans to start PDE5 inhibitors treatment to fully understand the main mechanism behind this drug performance. Since Cialis can be prescribed to patients, who are 18 years old and above, then you need to ensure that you meet this criterion before taking this drug. The main mechanism behind Generic Cialis function involves expansion and relaxation of blood vessels walls, which causes improvement of blood flow in cavernous penis body and results in erection. Nevertheless, Cialis is not able to enhance sexual desire and libido or improve ejaculation related issues. Hereby, after taking Cialis, a sexual arousal is still required in order to attain erection. How Cialis Should Be Administered Cialis is readily available in a form of pills for oral administration and should be taken with plenty of water. This medication can be taken both with and without food. Nevertheless, it is crucial to point out that the response time of specific PDE5 inhibitor can be slower down due to big portions of food or heavy meals. Hereby, it is important to avoid taking Cialis after a heavy meal. Majority of men start suffering from sexual disorders as aging progresses, as well as due to unhealthy lifestyle and various cardiovascular disorders. In such cases Erectile Dysfunction can progress in a moderate and even severe form. Likewise, the dosage of Cialis (e.g. 2.5mg, 5mg, 10mg or 20mg) is fully dependent on ED severity, age of patient, his lifestyle, and presence of pathologies, if any. Generally, Cialis is advised to be administered minimum 30 minutes prior to sexual intercourse. Higher doses of 10mg and 20mg are contraindicated for daily intake or continuous treatment, as high content of active ingredients may lead to unwanted negative effects. For male patients who have a continuous and active sexual lifestyle the Cialis dosage of 5mg or 2.5mg will be enough for administration on daily basis around the same time. Daily dosage enhances the ability of a man to get an erection whenever necessary. List of Important Information, Side Effects and Contraindications for Consideration It is a well-known fact that the prices of medications sold online and in regular pharmacies may differ a lot. First of all, online pharmacies may have more promotions and special offers, since it is a highly competitive market. Each online pharmacy may offer flexible price range for Cialis depending on its dosage and packaging. For example, certain pharmacies may even set the price of Cialis per tablet. However, certain customers in attempt to reduce the costs associated with ED treatment sometimes tend to purchase cheaper Cialis versions that are available online and don't read the leaflet with drug instructions. Cialis is generally a safe ED treatment, but it can also cause certain side effects for specific patients. Majority of side effects are linked to administration of Cialis and may appear in a moderate form, which does not require a full stop of treatment. Anyway, it is very crucial for all patients to know most common possible side effects of Generic Cialis, such as: indigestion; belching; heartburn; stomach ache/upset/discomfort Besides that, the following side effects are less possible, yet still may be observed: tinnitus; dizziness; flushing; headache Based on a number of various studies, patients who take Cialis once a day, tend to not experience any of the side effects listed above. In certain cases, when severe kidney or liver diseases are exhibited, Cialis dosage may be adjusted to avoid worsening health conditions of the patient. Cialis (or Tadalafil) cannot be shared with other patients and should be administered in accordance with prescription and recommendations provided by healthcare provider. Cialis cannot be administered by women, children and men with acute cardiovascular disorders. Besides that, all patients who exhibit hypersensitivity to certain Cialis components should not take it as well. Avoid taking Cialis together with nitrates and drug types, which may produce nitric oxide. Never double the dose if you have accidentally missed a prescribed dose in attempt to compensate it - skip that dose and proceed with normal treatment as per prescription. Abstain from mixing Cialis with other ED drugs (e.g. Levitra, Stendra, Viagra etc.). Keep Cialis tablets in a dry and dark place away from direct sunlight and reach of children. Frequently Asked Questions about Generic Cialis How is Cialis different from other known medications for Erectile Dysfunction (ED) treatment? Cialis generally stays inside the human body system during a longer time comparing to other medications, and hereby exerts effects that last longer. However, no official studies were conducted to confirm the clinical effectiveness and reliability of Cialis comparing to other similar medications. What should I do if I am taking Cialis while undergoing treatment with other medications? It is very important to carry out a consultation in this case with your healthcare specialist and provide a complete list of meds that you take (including prescription and over-the-counter meds), so that the most comprehensive decision can be developed. Basically, Cialis cannot be taken with any nitro-glycerine type, since the combination of these drugs may reduce blood pressure to critical levels. How long does the effect of Cialis last? The effect of Cialis can remain up to 36 hours after the drug has been taken and aids with erectile dysfunction on daily basis, alongside with improved sensitivity to any sexual stimulation. However, the abovementioned effects can be achieved only if the medication is taken as per prescription. Conclusion In overall, Cialis demonstrates satisfactory results and trustworthiness in dealing with Erectile Dysfunction. This drug has already managed to earn a reputation of a well-known and effective solution for majority of male patients around the world. Various independent clinical researches and studies have proven the efficiency of Cialis treatment. Nevertheless, it is still important to carry out a medical examination and undergo a consultation with healthcare practitioner in order to ensure that Cialis is suitable for your particular situation.
